

## Press Release

### TopoSys GmbH, April 2005 – Full speed ahead into 2005

A new age is dawning at TopoSys GmbH. At the beginning of 2005, the company was taken over by a group of private investors and the company members, finances and the company itself were reorganised for the long term and the company was consistently geared to success. In the course of the takeover, the company's founder and Managing Director for many years, Dr. Rolf Katzenbeißer, has retired from the company. He has offered to continue to support the company in technical matters if required in future.

Alexander Wiechert, Managing Director of TopoSys states: "We are now looking to the future even more optimistically. The measures have enabled us to significantly improve profitability. This and the additional capital give us the necessary financial leeway to achieve our targets."

The main focus in the next few years will be on the further expansion of the Europe-wide service business and the further development of the "Falcon" fibre scanner. On this subject, Alexander Wiechert says: "The Falcon II has impressively proven its legitimate place in the market, the concept is superior to conventional mirror systems for a large number of applications and the integration with a RGBI line scanner makes the system unique. We want to establish ourselves as one of the big three hardware manufacturers on the world market. We will consistently expand the service business Europe-wide with selected partners. We are aiming to become market leaders here."
